

With **GEODIS Countbot**,
increase your inventory reliability
by simplifying stock counting

—
A disruptive inventory management solution

GEODIS
KEEP RISING

GEODIS Countbot revolutionizes your warehouse inventories

Stock counting is a key process for warehouses quality management ensuring stock accuracy by matching both physical and digital stocks.

Cycling or wall-to-wall, this physical operation is tedious, time consuming and complex to organize:

- Mobilization of human and material resources
- Counting "human" error due to repetitive and tedious task
- Entire supply chain impacted by the slightest gap
- Health risk for operators working at height
- Slowdown or shutdown required during the counting

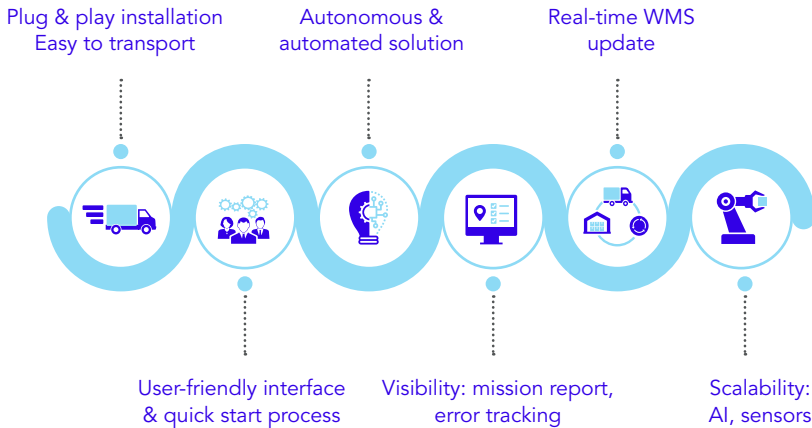

These constraints not only prevent from reaching the perfect stock but also reduce the possibility to achieve continued 100% inventory liability.

With GEODIS Countbot, simplify your stock counting and increase your inventory reliability!

A smart solution, combining robotics and drone technology

GEODIS has joined forces with Delta Drone, specialist in professional drones. After 3 years of R&D, this unique partnership has led to the deployment of GEODIS Countbot.

This patented solution is made of a mast stabilized with a drone, where cameras and intelligent sensors photograph and collect the pallet barcodes.

GEODIS Countbot brings together multiple software innovations that drive performance:

- Smart algorithms able to detect barcodes in real time
- Indoor pallet geolocation, no need for extra labels
- Ortophoto generation allowing the facility stock keeper to check and monitor pallets, if necessary

An innovative and robust solution delivering immediate benefits

Time saving

Fully automated
plug & play solution

Flexibility

Optimized time
and resources, as
inventories may be
carried out at any
time

Safety

Ensured safety of
people and goods

Reliability

Reduced risk of error
through automation

A fully automated warehouse inventory solution

Using the best of drone and ground robot technology, GEODIS Counbot identifies and locates full pallets whatever your site configuration. The output allows the real-time update of your warehouse management system with reliable data.

-  ● Plug & play
-  ● Totally secured
-  ● Faster than ever:
1 pallet/second
-  ● 100% reliability
even in low-light
conditions
-  ● 10,000 sqm
in 3 hours
-  ● 7 hours
autonomy
